Dear Ewen Stewart,

Re: Variance of Field Rotation Frequency

The purpose of this letter is to vary the frequency of the rotation of the eastern and western fields to address the sewage breakout occurring on Eagle Mountain Middle School Property for this upcoming winter season. The larger distance between the eastern field and the cut bank on School District 43 property should better facilitate the filtration of enteric organisms by the soil column and reduce the risk of these organisms being present outside of the disposal field area.

Accordingly, pursuant to clause 2.6 (Disposal Field Operation) of waste discharge permit 4606, the rotation of the two fields is hereby varied as follows:

October 1 to April 30 - The eastern field is in use exclusively during this period. However, the permittee must alternate fields at any frequency deemed necessary by the treatment system certified operator if the eastern field shows signs of overuse (e.g. surfacing effluent).

May 1 to September 30 – Rotate the fields monthly unless the western or eastern fields shows signs of overuse, in which case the fields may be rotated at a frequency at the discretion of the treatment system certified operator.

If you have any questions regarding this matter, please contact me directly at (250) 617-0324.

Yours truly,

A handwritten signature in black ink, appearing to read 'D. Bings', with a stylized flourish at the end.
