How to Embed a Video

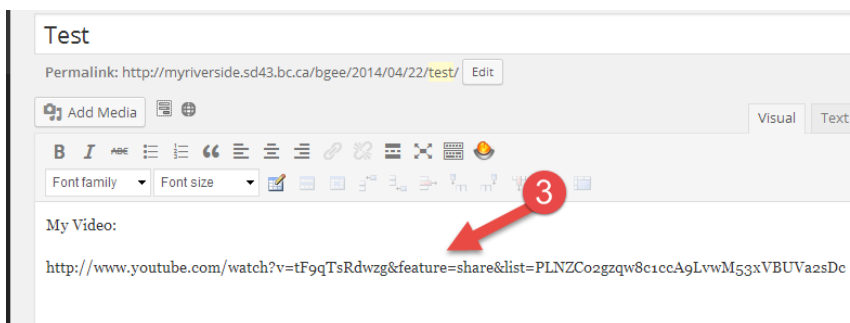

Videos from video sharing websites can be placed into your posts by using the 1) URL and 2) Embed Code

URL

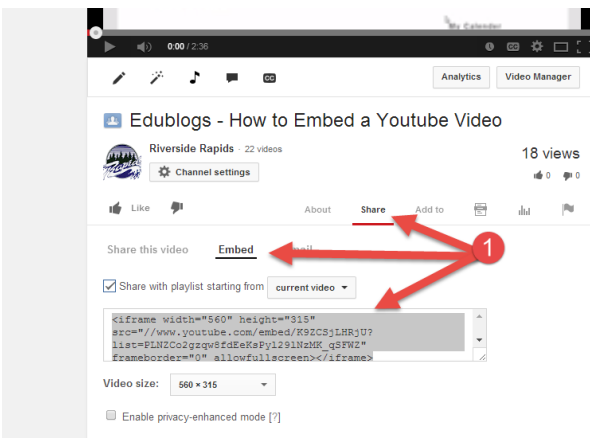

Step 1: Copy the video's URL from your web browser's address bar while viewing the video. For YouTube you use the video URL from "Share this video" under the Share option.

Step 2: Go to your Dashboard, select Posts, and select Add New

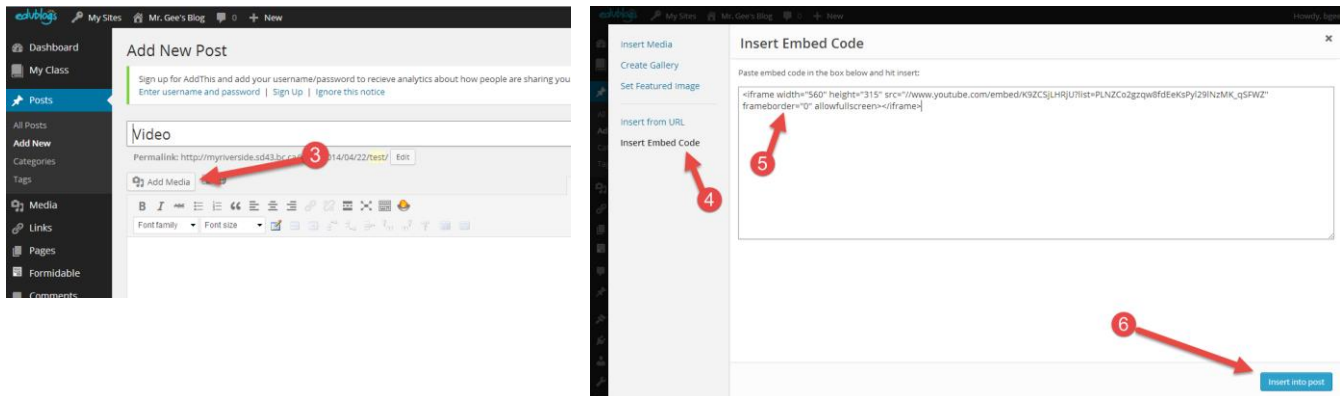

Step 3: Paste the URL on a line by itself in your post/page editor where you want the video to appear. Your video will appear on your blog when you publish your post.

Embed

Step 1: Locate the video you want to embed. Copy the embed code (when using YouTube, use the share option, and select embed to generate an embed code). Websites range in the methods they use to represent the embed codes, look closely for them. *For YouTube videos make sure you turn off "Show suggested video feature".

Step 2: Go to your Dashboard, select Posts, and then select Add New

Step 3: Place the cursor where you want the video to appear, and then click on Add Media

Step 4: In the Add Media window click on Insert Embed Code

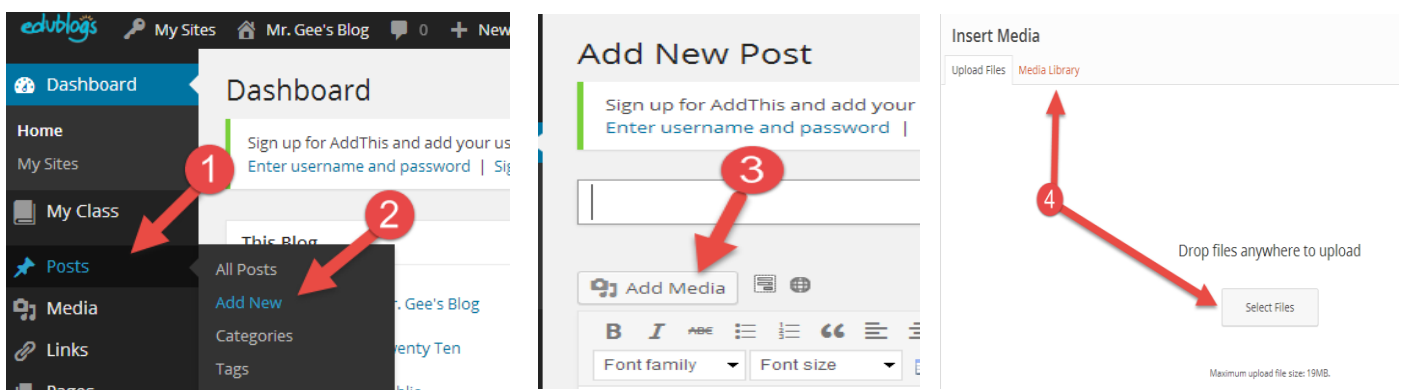

Step 5: Paste the embed code into the text box

Step 6: Click Insert into Post. Your media will appear when you publish your video
