

# Coronavirus

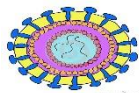

The Coronavirus is a new virus that is making people sick.

The virus is tiny, we can't see it, but scientist say it looks like a crown and

corona is the Latin word for crown. Some people call it the COVID-19.

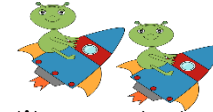

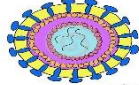

Once the Coronavirus enters a person's body, they will get fevers, a cough,

sneeze, and get really sick.

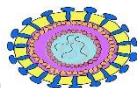

When people cough and sneeze, little saliva droplets will shoot out of a person's

mouth. The Coronavirus will then ride on these droplets, like rockets, and quickly

fly from one person's mouth, to another person's body. Now someone else can

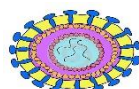

soon get the Coronavirus and get sick too!

It is important to cough and sneeze into our elbows and wash our hands

immediately after. We must wash our hands with soap, A LOT! This will help

slow down the spread of the Coronavirus.
