b. Tech Ed.

- i. Having two more class sets would mean every student in the school would have their own Solderless breadboard to test circuits on. This would make it safer as the students would not be sharing between learning groups. It also allows students more time to complete more complicated circuits as they could leave their partially completed project set up. Rather than dismantling at the end of every class so it can be made available for other classes

1. We would need 50 of each item. The cost will be \$422.50 before taxes.
